

Career Summary

Full-stack developer with 5+ years of experience, focused on JavaScript and TypeScript since 2020. Skilled in building full-stack applications using Node.js and React. Most comfortable working with JavaScript/TypeScript across the stack, but have also worked with C# and ASP.NET when needed.

Work Experience

Ministry of Interior, Egypt (Full-Time): 2023 – Present
Building internal web apps using Node.js and React. Handling both backend and frontend tasks, with experience in real-time features and bilingual support.

DMS , Full-Stack Developer (Part-Time), Remote: May 2023 – Nov 2023
Developed a medical insurance application with Role-Based Authorization (RBA) and Claims-Based Authorization (CBA) using React (primary role: frontend) and contributed to backend tasks built with ASP.NET and Microsoft SQL Server.

Avail “Startup”, Backend Developer (Full-Time): 2020 – 2022
Developed APIs and backend services using Node.js, Express, and MongoDB/PostgreSQL for various client projects.

Excel-VBA Developer [Freelance]: 2018 – 2020
Created custom Excel tools with VBA to automate reports, improve data entry, and streamline workflows for small businesses.

Projects

Technical Support App https://ts.ashehata.xyz/ Built with React, Express, WebRTC, and Socket.IO a full stack app where clients create tickets, supervisors delegate them to available technicals, and technicals connect via voice and screen sharing. Streams can be paused and resumed.	Residency Permit Reservation System https://eres.moi.gov.eg/ Frontend built with React. A multi-step (8-step) reservation form for new or renewal residency permits, where each step depends on the previous. Includes step persistence so users return to where they left off.
Market & Branch Management System Backend built with NestJS. Supports Excel uploads with smart column detection, validation, and detailed reporting of new, duplicate, or invalid entries (with exact cell locations). After review, changes can be accepted for fast bulk insert or declined to discard all data.	POS System with Public Gallery Full-stack app built with React and Express, featuring real-time sales updates via Socket.IO. Includes a public gallery to showcase in-stock items, reflect live discounts, and share item-specific links. Gallery and individual item visibility can be toggled anytime.

Skills

- NodeJS

•SocketIO

•Git
- ReactJS

•MongoDB

•AWS
- ExpressJS

•PostgreSQL
- NestJS

•SQL-Server
- WebRTC

•Docker

Additional Information

- Native Arabic speaker, professional proficiency in English
- Strong communications and collaboration skills
- Passionate about embracing new technologies and continuous learning
